

WHAT IS CLAIMED IS:

1. A cabinet lamp comprising:

a mask;

two clamping seats at two sides of the mask; each clamping seat having a
5 recess at an inner rear side thereof; a front end of a lower side of each
clamping seat having a long trench;

a lamp frame behind the mask; a light emitting body being installed to the
lamp frame;

a reflecting mask within the mask;

10 a transparent plate connected to and below the mask; each of two sides of
the rear end of the transparent plate being formed with a block; each block
having a stud for being inserted into a recess of one corresponding clamping
seat; wherein the stud is swingable and slidable in the recess; a front end of the
transparent plate being movable to enter into the two clamping seats along the
15 trenches of the two clamping seats to position the transparent plate; wherein
when the transparent plate moving backwards, the front ends of the transparent
plate separates from the recesses and the transparent plate is swingable along
the stud so that the light emitting body is detachable; and

a circuit box electrically connected to the clamping seat.

20 2. The cabinet lamp as claimed in claim 1, wherein each clamping seat
has a receptacle and at least one conductive wire is used to connect the two
receptacles; the conductive wire is electrically connected to the circuit box.

3. The cabinet lamp as claimed in claim 1, wherein each of the mask and
the clamping seats is formed with a cruciform slot so that when the cabinet
25 lamp is suspended, screws are inserted into the slots for fixing the cabinet
lamp.

4. The cabinet lamp as claimed in claim 1, wherein the lamp frame has a
bottom plate; the bottom plate is attached to bottoms of the two clamping seats
by screwing so that the cabinet lamp can be detached or assembled.

5. The cabinet lamp as claimed in claim 1, wherein the reflecting mask is made of metal; have a long shape; is painted with paint and has a wide plate.
